

OB Truck Midlands - The Hog

Contact: Dave Taylor : +44 (0) 7703 341 365

42Live Main Office : +44 (0) 1476 50 40 42

I am a freelance IT Broadcast engineer and Cameraman, starting off my career as an electrician then into IT and over the past few years I have been focused on IP streaming

The Hog is a Vauxhall Vivaro was built by myself and is based on LiveU transmitting over Ka-Sat and 4G but is also capable of streaming via Quicklink, MobileViewpoint and others

This truck is based in the Midlands covering many different news regions but also able to travel. The Hog covered the Airport bombings in Belgium!

My streaming experience has been varied covering many football matches, Regional, National and International News also Film Premieres, Snooker, Tennis & Wrestling! Throw in watching / streaming eggs hatch for 7 days - its definately been varied!

We can stream direct or to CDN, we can stream content for you from any location to any location world wide and across the internet. We stream across a combination of 3G, 4G and KA-Sat giving us redundancy across multiple paths meaning that your transmissions are never left to chance

To learn more about our steaming and media management capabilities please contact us for further details.

We only offer custom packages because we understand that no two events are the same

This truck has been setup for High Definition Broadcasting, web streaming and as a remote internet provision, it has been built to a high specification and includes the below equipment:
