# RT Software Euro 2016 Rental Package

Make your coverage of Euro 2016 stand out by taking advantage of the RT Software 2016 Rental Package.

By taking up the offer, you will have access to industry leading telestration graphics using RT Software's [tOG-Sports Pro](#) analysis system to add engaging analysis for pre-match, half time, post-match and highlights.

Using tOG-Sports Pro, graphics operators can produce compelling graphics sequences featuring state of the art tied to the pitch graphics such as off side lines, player trails, virtual views of the play and much more.

Live presenter control can be done using a connected touch screen, or

wirelessly with a remote device such as a tablet adding value to your in studio programs.

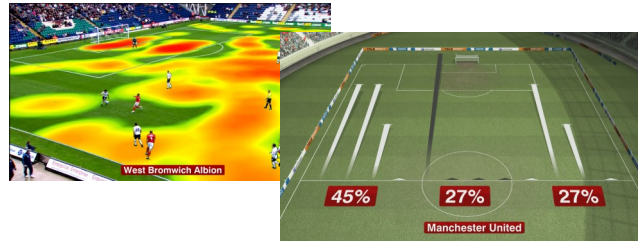

The standard package consists of the loan of a [tOG-Sports Pro](#) system, including hardware, fully licensed for use for the duration of the loan period. Also included as standard is access to RT Software's extensive library of on-line training tools and tutorials and a generic interface to allow presenter control from

tablets and remote devices.

If all this is still not enough, options are available to customise tOG-Sports even further.

Full screen data rich graphics such as heatmaps, pass maps and routes to goal generated from an OPTA or equivalent data source are available with the **Stats Graphics Option**.

Give your presenter full control of graphic analysis with the **Touch Screen Application** a ready to use set of Euro2016 branded and designed set of graphics. We can also custom design a set of graphics for your precise needs.

We can even put all your graphics in the studio to interact with your presenters with the **Augmented Reality** option. Included in the price of the

Augmented Reality option is the rental of a single camera [StarTracker](#) system from our partners Mo-Sys,

StarTracker

to give full freedom of camera movement across the studio floor.

The standard system will integrate with and control a channel of an external replay server such as EVS/GV K2/SAM Livetouch. The addition of the **Record to Disk** option records oncoming streams to internal SSDS to allow operators to pause, re-wind and telestrate on a live stream without missing any action.

Availability is limited so don't delay in taking advantage of this offer to enhance your coverage at minimal capital outlay.

Stunning broadcast graphics, innovative interaction and control

tOG Sports

## More Information

### The Details

As we want you to get the most out of tOG-Sports we ask that you purchase at least two days of training in addition to the rental cost. Training can take place at RT Software's office or on site plus expenses.

We also ask that in addition to the rental cost, you pay a £5,000 deposit to cover the cost of hardware.

We are confident that you will love tOG-Sports so much that you will want to keep the system at the end of the rental period, but if you don't, just send the system back to us in good condition and we will fully refund you the total amount of the hardware deposit. If you do decide to keep the system, all rental costs paid will be discounted off the final purchase figure.

Rental duration is from 1st June 2016 to 15th July 2016 and availability is limited and available on a first come first serve basis.

Hardware included is the rendering PC, tablets and screens are not included.

Information on the Mo-Sys star tracker system required for the Augmented Reality option is available here: [www.mo-sys.com](http://www.mo-sys.com)
